

TapGear - JoySpinner - Signaller - Remote Control

RB Systems is a world leader developing unique and sophisticated micro-computer devices that enable the disabled driver to retain user - friendly, safe control over the vehicle's electrical functions - from almost any location.

TapGear

TapGear is a *Gear Shift Control* that installed into any automatic transmission. It provides easy activation of all gear lever positions – including Tiptronic control and Overdrive, from a simple press of a button.

Using precise servomotor actuator movement, and *CanBus* digital connection, reliable gear positioning is assured.

JoySpinner

Ergonomically designed and compact for comfortable use, this 12x function RF remote-control knob with quick release mounting bracket provides easy activation from a 4x way joystick and 2x push buttons.

Signaller

CanBus or Relay connection secondary driving control system. Up to 22x electrical driving functions from one easy, quick installation.

A Hybrid system with many operational controlled inputs: Illuminated keyboard and/or RF *JoySpinner* and/or RF remote-control and/or Standard push bump buttons.

Vehicle Access Remote Control

Open and close Doors, raise and lower Hosts and chair Elevators automatically from anywhere. Up to 5x Functions - universal RF remote control.

Using *CanBus* hi-tech technology our products are smaller, easier to install and provide conflict-free communication with the modern electrical systems of today's vehicle.
